

Ka Yang

Ceramist

My role at Renstrom

Working with different porcelains and layering techniques, Ka is able to fabricate esthetic life-like restorations. She is determined to meet the doctor's specifications by checking all aspects of the crown including the fit, bite, contact, and shade. Ka does work for many different doctors and pays close attention to the preferences they each have.

Highlights of my career

- Received diploma for dental technology at Century College
- Has worked for two great labs (Renstrom and Crocus) which are now combined as one lab
- Has many years working with porcelain but also has experience in the model room and opaquing

My Renstrom/Crocus Mission

I enjoy working on challenging cases where I can use my creative ability to achieve optimal results while at the same time enhance my skills. I am always open to learning from others around me because at Renstrom we all have strengths in different areas. I have been a ceramist for many years and enjoy designing natural looking crowns that keep people smiling.
