

Lori Steinmatz

Opaque/Porcelain Technician

My role at Renstrom

Lori works in the porcelain department and opaques all of the metal work before it is built up with porcelain. She also works with ceramics and uses different techniques and colors of porcelain, giving the crowns more depth and texture so that they resemble natural teeth.

Highlights of my dental career

- While at Renstrom I have gained an abundance of knowledge by learning new methods and techniques from many talented ceramists
- I have had the opportunity to learn and work in three different areas of the lab; model room, opaquing, and porcelain

My Renstrom Mission

I have always had a passion for learning, which is probably why I enjoy dental technology as much as I do. I know that at Renstrom people go out of their way to teach you new things and keep up with the latest advancements and not all labs are willing to do that. Quality control and talented people make us the great lab that we are and that doctors can depend on.
