

Renstrom Dental Studio, in conjunction with Vident Corp., is proud to present an educational seminar designed to help you learn about dental shade matching. Our goal is to teach you how to determine the correct shade so that you can have confidence that the patient will be satisfied with their new restoration. We will discuss guidelines, helpful hints, and proper use and benefits of the 3D Master Shade System.

Ask Yourself These Questions

Do I determine the shade correctly and communicate all the necessary shade information to my lab for a perfect restoration?

Am I giving my patients the most natural-looking restoration possible?

Are my patients satisfied that their restorations match their bleached teeth?

Do I have confidence in my shade taking ability?

Am I aware that determining the proper value is the most critical element in shade measurement—and that a crown with the correct value can match perfectly even if the chroma and hue are slightly wrong?

Why accept a shade that's

"close enough"?

This presentation will provide you with a basic knowledge of color principles and hands-on experience in taking shades and communicating the shade information to your technician. The result... beautiful restorations and happy patients.
