Course #4

**TEMPORARY CROWN
FABRICATION**

Presented by

Jeffrey L. Benson DDS

This course will provide assistants with easy and efficient techniques for making temporary crowns. Participants will gain hands-on experience making temporaries using various techniques.

Dr. Benson recently retired from active practice and has joined the Renstrom team as a consultant and also teaches in the operative clinic at the University of Minnesota Dental School.

4225 White Bear Pkwy Suite 1240

Vadnais Heights, MN 55110-3349

612.407.0491 800.747.1321

Seminar Topics:

- Which type of matrix to use for different clinical situations.
- Which temporary crown material to use.
- How to modify the temporary matrix for better results.
- Using a diagnostic wax-up to improve your temporaries.
- Repairing bubbles and voids.
- Modifying the shade of a temporary.
- Finishing and polishing your temporaries.

For over 43 years, Renstrom Dental Studio has partnered with its doctors to produce the highest quality restorations possible. Our commitment to continuing education for our lab technicians and our doctors has been a big part of our success, and this series of assistants courses is the logical extension of that commitment. The previous assistant's courses focused on photography, shade taking and impressing. This course will focus on the fabrication of temporary crowns. At Renstrom we believe that assistants should be performing all legal tasks for which they have been adequately trained, but busy practices often find it difficult to set aside time to provide the necessary training. This seminar is designed to provide assistants with hands-on experience in temporary fabrication and the confidence to begin making temporaries on real patients.
