**Michael Skramstad, DDS
Thursday, March 11th 2010
Roseville, MN**

Renstrom Dental Studio is proud to present to you a second educational seminar focused on the IPS e.max system. Although most doctors are now familiar with the Lithium Disilicate material and many are prescribing it, there are new clinical studies and valuable information that is essential for doctors to know. Dr. Skramstad has been working with the e.max system for years, not to mention the extensive amount of research he has done and is currently doing. At this course he will cover everything from preparation to cementation and also advantages of prescribing e.max versus other materials on the market. After seeing actual cases and hearing what Dr. Skramstad has to say about this versatile material, you will be confident in what it can do for you and your patients. There are always questions and concerns when it comes to working with newer materials which is why we encourage you to attend this seminar. E.max has proven to reveal the strength and esthetics required everywhere in the mouth and the results we've seen have been phenomenal!

Yes, There is a cost effective alternative to PFM and Zirconia based restorations!

- **Overview of prep design, applications, and bonding/ cementing procedures**
- **Full contour alternatives**
- **Scientific documentation**
- **Laboratory Communication**
- **Advantages of using the IPS e.max system**
